

Innovative and inspiring construction set

The heart of innovation :
Only 1 smart connector

More than 10 mobile and fixe assembly possibilities...

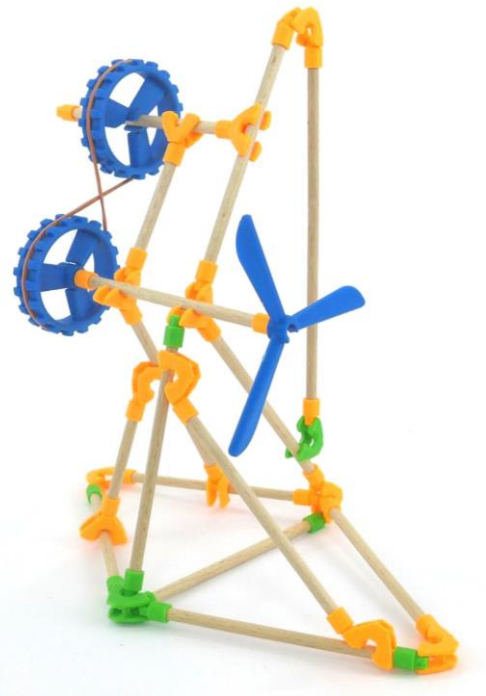

Clever and eco-friendly designed

two years of R&D to achieve these multiple functions in this unique part which also allows to be produced with plant-based materials

Mobile possibilities :

the smart connector allows movements of rotation and translation. Add the special wheel wich is also a pulley and make your construction live !

Cost-reduced

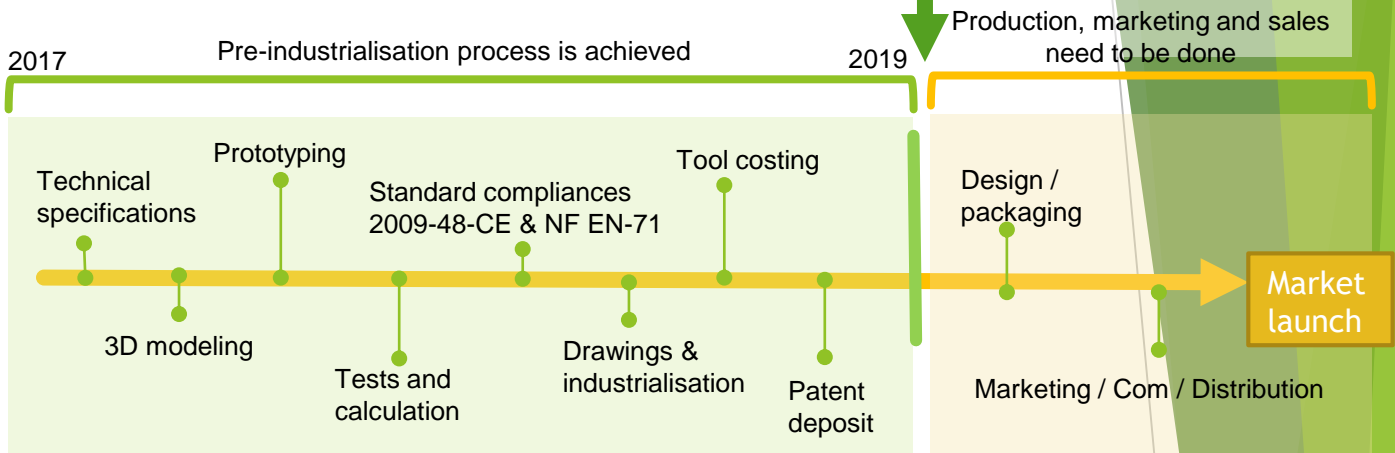

Fun & inspiring

Adapted to bio-based plastic

Wide market opportunities

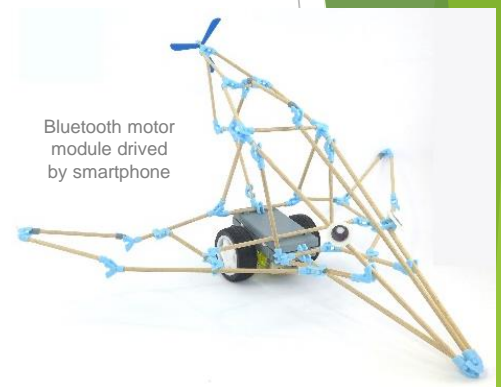

Patented

Milestones and next steps

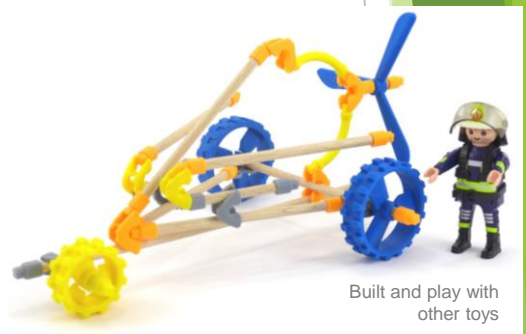

Who are we?

We are an innovation engineering office, and great creatives! Parents of young children, we wanted to create a game that does not exist on the market and that meets our parents requirements: eco-friendly, safe, fun, educative and inspiring. We had this game tested by dozens of kids!

Why do we contact you?

As we have said, we are inventors... not sellers! But we would love to see our new toy on the market, and knowing that children play with it. Thus we're are looking for a toy **manufacturer** who can **put this innovation on the market**. The patent and all R&D reports are for sell. Our study package includes: design, calculations, industrial drawings, prototypes, physical tests and world patent.

Let's talk about it!

We invite you to watch the videos on the website : www.prodev-cao.com/toy
If you feel that it should be a good opportunity for your business, thank you to contact us!
